# Workplace Death Analysis of 2024

## 1. Background

A workplace accident is an unexpected event that occurs in a work environment, resulting in the injury or death of an employee. Workplace accidents occur in any industry, including construction, manufacturing, services, agriculture and transportation.

There are several causes of workplace accidents, which can include road accident; explosion; electrocuted; lightning; falls from the floor or above; hit by hard or heavy objects; drowned in water; burned by fire; being exposed to poisonous gas and collapse of hills, soil, bridges, buildings or roofs, walls. One of the regular tasks that SRS has been truly carrying out since its beginning is keeping a record of workplace accidents that result in death and injury and publishing the report. In order for the public to understand the actual working conditions and advocate for a safe and decent workplace, one of the goals of this study is to gather the data in one location and make it available to them.

## 2. Methodology

This study examines workplace fatalities that occurred in Bangladesh in 2024 in the Manufacturing, construction, service, agriculture, and transport sectors. It also analyzes the events by industry, cause, age and gender of the deceased, and location of the incident. By keeping an eye on 11 regional newspapers<sup>1</sup> from Barisal, Chattogram, Khulna, Rajshahi, and Sylhet as well as 15 national newspapers<sup>2</sup>, information concerning the deaths was discovered.

### 2.1 Kinds of deaths monitored

This report focuses on the deaths of workers at the workplace, arising out of issues relating to occupational safety and health and concerned with the management of the work, including details of transport workers (drivers or conductors and helpers working in vehicles) who have died in the course of their work. However, the report does not include deaths of workers travelling to or from work by using public vehicles as these deaths primarily raise issues of road traffic safety rather than occupational health and safety. But any work related travel by using an official vehicle is included. The report also does not include deaths of workers as a result of police, or other kinds of Violence or in incidents outside of the workplace – as none of these relate to occupational Health and safety issues. This report focuses on industrial and service sector deaths – but it does include details of certain agricultural deaths (where the newspaper reports clearly indicate a workplace safety issue). Very few agricultural sector deaths are reported in the newspapers and those are reported mainly died from lightning stroke. Deaths at sea is another phenomenon where in most of the cases the newspaper publishes only the list of missing fisher folks – which makes it very difficult to know whether the incidents have anything to do with the management of health and safety issues. In addition, further press reports often fail to indicate the final conditions of the workers.

1. Regional: Daily Azadi, Purbakon, Purbodesh, Sonali Sangbad, Sonar Desh, Sunshine, Purbaanchal, Janmobhumi, ShamoyerKhabor, SylheterDak, Shabuj Sylhet, Shahanama, Dhakshinanchal, Daily Paribartan
2. National: The daily Star, The Independent, New Age, The Daily Sun, Ittefaq, ProthomAlo, KalerKantha, Samokal, Sangbad, Janakantha, Jugantor, Nayadiganta, Inquilab, Jai Jai Din, Banik Barta

## **2.2 Accuracy of the Information**

The accuracy of information regarding workplace deaths can vary depending on a variety of factors, such as the source of the information, the type of incident, and the thoroughness of the investigation. The prime source of this information is from monitoring deaths that are reported in national and some regional newspapers. Relying on this data creates two problems. The first problem is that newspaper reports almost certainly do not reflect, by a high margin, the actual number of workplace deaths that have taken place. The second problem concerns the accuracy of the newspaper reports themselves. Interestingly, that in the great majority of the cases, the key information contained in the papers was accurate. Though, it was usual for there to be some small errors in the spelling of the names of the deceased, the incident address and the circumstances of the death. It is rarely found that those deaths were not work-related or the location of the death could not be identified.

## **3. Analysis of workplace**

### **Analysis of workplace deaths in 2024**

We have analyzed these deaths by looking at the following issues:

- Workplace deaths in different districts;
- Workplace deaths in different industrial areas of Bangladesh
- The sector in which the death took place;
- The month of the year when the death took place;
- Age distribution of the workers who died;
- The gender dimension; and
- The causes of deaths.

The newspaper-based survey showed that in 2024 as many as 758 workers died in 639 workplace accidents. Compared with the previous year, 2023, the number decreased about 117.

### 3.1 Workplace deaths by year

The provided bar chart illustrates the number of deaths over a span of 10 years. Each year, the death rate has shown an upward trend. In 2024, the number of deaths reached 758, compared to 875 in the previous year from 2015 to 2024, the total stands at 5673. However, it is essential to recognize that these figures likely underestimate the true numbers. Many workplace deaths may go unreported in newspapers, contributing to this discrepancy.

### 3.2 Workplace deaths in different Districts

The given table presents information on workplace deaths in various districts in the year 2024 (Jan-December). According to the data, there were a total of 639 incidents resulting in 758 deaths nationwide. The highest number of fatalities occurred in Dhaka, with 83 deaths (10.98%) resulting incidents. Chattogram followed as the second-highest with 62 deaths (8.20%) from 53 incidents, Mymensingh with 57 (7.54%) from 51 incidents, Gazipur with 31 (4.10%) fatalities from 25 incidents.

### 3.3 Workplace deaths in different industrial areas of Bangladesh

The provided horizontal bar chart illustrates the frequency of industrial accidents across various regions, with a particular emphasis on those regions witnessing the highest fatality rates. According to the data, Dhaka, Chattogram, Mymensingh, Chattogram, Gazipur, Dinajpur, Narayanganj, Tangail, Bogura, Sirajganj and Pabna stand out as the regions most susceptible to industrial accidents, collectively contributing to over 48.06% of the total fatalities.

The chart vividly depicts Dhaka as the epicenter of industrial accidents, closely trailed by Chattogram and Mymensingh Gazipur. Following suit, Gazipur, Dinajpur, Narayanganj, Bogura, Pabna, Tangail, and Sirajganj also register notable occurrences of industrial mishaps.

This visualization not only highlights the prevalence of industrial accidents but also underscores the urgent need for heightened safety measures and regulatory enforcement across these regions to mitigate future tragedies.

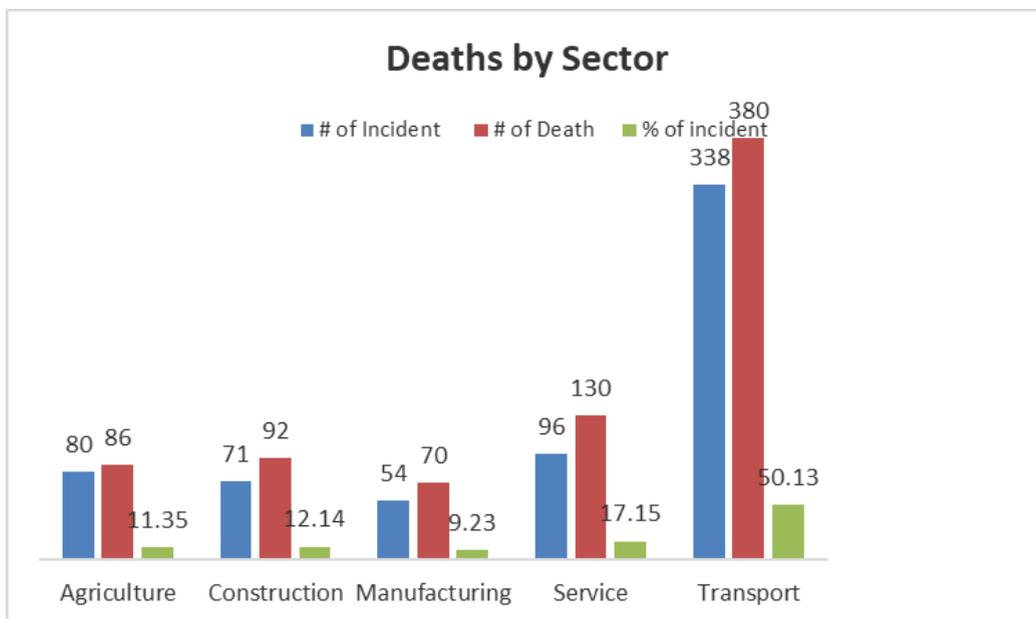

**Figure 2: Deaths in different industrial areas of Bangladesh**

### **3.4 Deaths in different working sectors**

It is observed that the highest number of deaths occurred in the transport sector 380 (50.13%), followed by the Service Sector 130 (17.06%), Construction sector 92 (12.17%), agriculture sector 86 (11.38%) and Manufacturing sector 70 (9.26%).

The visual depiction of the data underscores the gravity of workplace fatalities, with the transport sector posing the most significant risk. This insight underscores the importance of targeted interventions and enhancements to mitigate workplace hazards, particularly in high-risk sectors like transportation, as well as other sectors experiencing notable fatality rates. This comprehensive analysis not only elucidates the severity of workplace safety issues but also provides a strategic roadmap for implementing preventive measures and fostering a safer work environment across diverse sectors.

### 3.4.1 Deaths in Manufacturing Sector

The provided table offers information on the distribution of workplace deaths within the manufacturing sector in Bangladesh, highlighting the industries with the highest number of fatalities. The table indicates that Garments, Brick fields, Oil Factory, Textile Mill/Factory, Button Factory, Steel Mills, Plastic factory, Furniture Factory were also associated with significant numbers of deaths. This information could be used to identify the most dangerous industries within the manufacturing sector and to target interventions and improvements to reduce the number of workplace deaths in these sectors.

### **3.4.2 Deaths in Construction Sector**

The provided table displays information on workplace fatalities in the construction sector in Bangladesh, with a particular focus on the number of deaths associated with different types of construction projects. According to the table, Building Construction was associated with the highest number of deaths, with 83. fatalities. Conversely, Road construction, Bridge/ Flyover projects, Drain/Brick Crusher operations exhibit comparatively lower fatality rates.

### **3.4.3 Deaths in Transport**

The table highlights the vulnerability of Bangladesh's transport sector, particularly emphasizing the vehicle types associated with the highest fatality rates. It reveals that a notable 140 fatalities resulted from accidents involving various vehicles, including Tractor/Jeep/Lorry/Truck/dump truck/Covered Van/ Pickup van/Trolley . Following this,

the data indicates that 130 deaths occurred in accidents involving Alamshadu/Auto Rickshaw/Easy & auto Bike/Nasimon/Karimon/auto Van/Three wheeler/Rickshaw/Van. Lastly, the text notes that 93 deaths were reported in accidents involving Bus/Micro Bus/Mahendra/Tempo/CNG/Private Car. It's pertinent to mention that these figures exclusively pertain to workers, encompassing drivers, conductors, and helpers within the transport sector.

### 3.4.4 Deaths in Service

The provided table presents information on workplace fatalities in the service sector in Bangladesh, with a particular focus on the number of deaths associated with different types of service providers. According to the table, a significant number of deaths occurred among day laborers with 68 fatalities resulting from 49 incidents.

In addition to day laborers, the table also highlights the risk of fatal accidents for electricians or those involved in electric supply works, with 16 deaths. While this group had a lower number of fatalities compared to day laborers, the data suggest that this type of work may be particularly hazardous and may require additional safety measures to reduce the risk of accidents. Overall, the table provides a clear and concise overview of workplace fatalities in the service sector in Bangladesh, highlighting the importance of targeted interventions to reduce the number of deaths among day laborers and other service providers. The data could be used to inform the development of safety programs and policies aimed at reducing workplace fatalities and improving safety outcomes in the service sector.

### 3.4.5 Deaths in Agriculture

The provided table presents data on workplace fatalities in the agricultural sector in Bangladesh. The data suggest that the most significant number of deaths occurred in paddy fields, with 67 fatalities resulting from 62 incidents. In addition to paddy fields, the table also highlights the risk of fatal accidents in Live Stock/ Agrofarm sub-sectors within the agricultural industry, with 11 deaths resulting from 11 incidents. While this information is limited, it suggests that there may be additional hazards in the agricultural sector that require further investigation to reduce the risk of workplace fatalities.

### 3.6 Deaths by Age

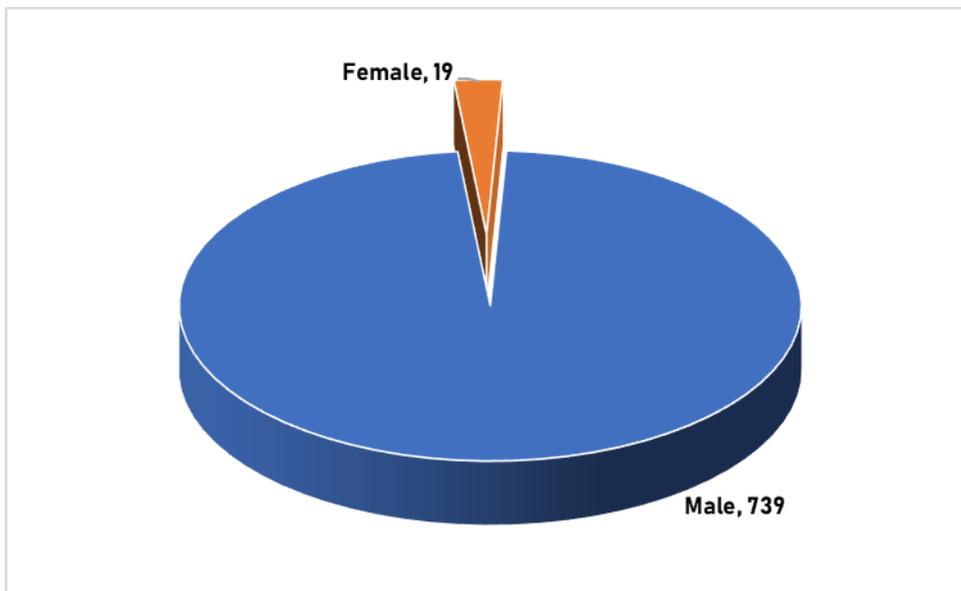

Data shows that, the highest number of deaths occurred in the 21 to 30 years age group, which accounted for 187 (24.67%) of the total deaths. The 31 to 40 years age group was the second highest, with 169 (22.30%) of the total deaths, unidentified was the third highest, with 144 (19.00%) of the total deaths. 41 to 50 years age was the Fourth highest, with 102 (13.46%) of the total deaths. 69 (9.10%) of the deceased workers were 20 years old or younger, 8.71% (66) were 51 to 60 age and 2.77% (21) were older above the 60.

**Figure 4: Age of the deceased**

### 3.7 Deaths by Gender

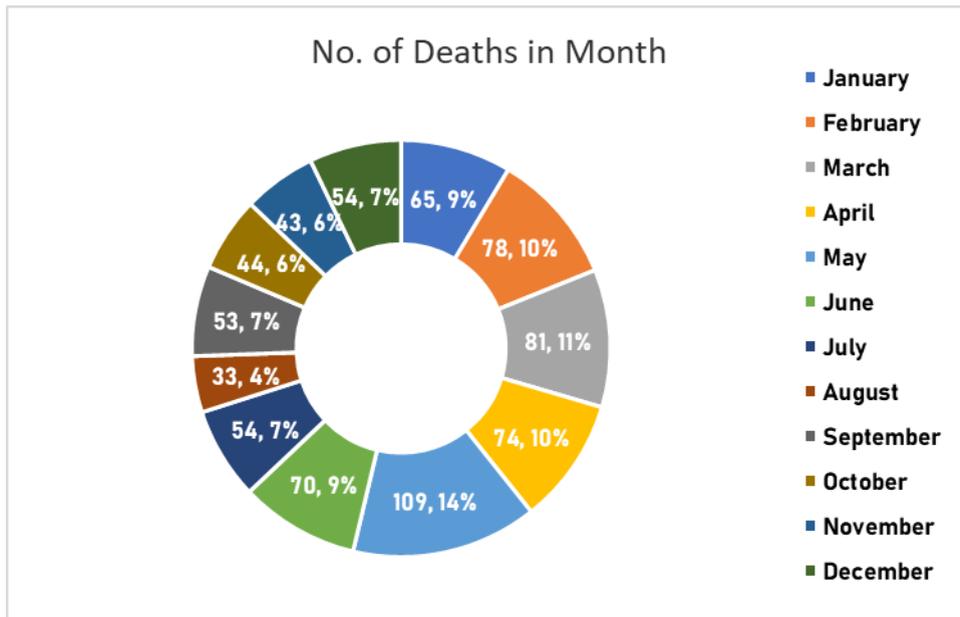

It is noteworthy that almost all the workers were male 739 (97%) and 19 (3%) were female who died in workplace accident.

**Figure 5: Gender of the deceased**

### 3.8 Deaths in different Months of 2024

The highest number of deaths in the workplace occurred in May, 109 workers (14% of total), then in March, 81 workers (11% of total death), 78 workers (10% of total death) in February, in April it was 74 (10%), in June it was 70 (9%), in January 65 (9%), in July 54 (7%). The lowest number of deaths in the workplace occurred in August 33 (about to 4%). Most of the deaths occurred in the 2<sup>nd</sup> quarter of the year (April – June) with 253 (33%) deaths and the least number of deaths occurred in the 3<sup>rd</sup> quarter of the year, 140 deaths (18%).

**Figure 6: Deaths by Month**

### Summary of Findings

The number of workplace deaths was 758 in the year of 2024.

- The highest number of deaths involved workers aged between 21 and 30; 187 (24.67%), which is common for every year.
- Total 739 (97%) of the deceased were male workers.
- The highest number of deaths occurred in the Transport Sector; 380
- Road accidents, electrocution, lightning strike, fall from Height, explosions, crushed by objects, drown in water were the main causes of death.

- In the 2nd quarter (April - June) of the year, 33% deaths, the highest number of deaths took place.
